

DESCRIPTION AND APPLICATIONS

The Electro-Voice Model 302, a suspension shock mount accessory, introduces a new, more effective shock mount design. It may be used with either the Model 307 or Model 309 shock mount. When combined with the Model 309, it provides near-perfect shock isolation for the internally shock-mounted RE20 microphone. Model 307 shock mount, which will adapt to boom use those microphones with a 3/4-inch (19mm) cylindrical case, is made nearly 75% more effective when used with the 302.

The unique spring/arm principle of the Model 302 damps mechanical noise to an absolute minimum, yet maintains excellent balance and center of gravity characteristics for boom operation.

The Model 302 shock mount accessory may be easily mated with either the 307 or 309 assemblies (refer to Figure 2, an exploded assembly drawing of the 307 showing model 302 attached). The bail supplied with model 307 is removed and discarded, and the model 302 is attached in its place with the lead knobs and washers supplied. Attach model 302 to the 309 with wing screws instead of the lead knobs.

SPECIFICATIONS

Material:	Steel and lead
Weight:	1 pound, 9 ounces (.9kg)
Color:	Nonreflecting gray
Dimensions:	(See Figure 1)
