Model 355A Windscreen

SPECIFICATIONS

Material:

Acoustifoam™

Weight:

2 g (.07 oz)

Finish:

Charcoal gray

Size:

Fits Models RE55 and DO54 microphones

DESCRIPTION

The Electro-Voice Model 355A Windscreen was designed for use with the Models RE55 and DO54 microphones. The 355A will reduce the noise generated by air rushing past the microphone. This air movement may be caused by "close talking" the microphone or by wind, when used outdoors.

The Model 355A Windscreen is fabricated from Acoustifoam™ material developed specially for this use. The frequency response and polar pattern are not significantly affected (attenuation of signal is less than 1 dB at 10,000 Hz).

INSTALLATION

The Model 355A is designed to fit snugly over the microphone. To install, stretch it gently over the front of the microphone and slip it into position. The Acoustifoam material will shrink tightly into position in just a few seconds. A snug fit is all that need be checked.

IMPORTANT NOTE

To accomplish the greatest possible wind blast reduction, it is recommended that a Model 513A Filter be used with the microphone and the Model 355A. The 513A is a low frequency cutoff filter that provides high attenuation of frequencies below 100 Hz.

The 355A should be washed periodically with mild soap and warm water to maintain the porosity of the windscreen.

Specifications subject to change without notice.
