Model 360 Windscreen

SPECIFICATIONS

Material:

Acoustifoam™

Weight:

6 grams

Color:

Charcoal gray

Size:

Will fit EV Models 660, 664A, PL6

DESCRIPTION

The Electro-Voice Model 360 Windscreen was created for use with the 660, 664A and PL6 microphones. It will reduce the noise generated by air rushing past the microphone.

The Model 360 is fabricated of Acoustifoam™, a material specially developed for this use. Attenuation of signal from its use is less than 1 dB at 10,000 Hz: frequency response and polar pattern are not significantly affected.

INSTALLATION

The Model 360 is designed to fit tightly over the microphone. To install, stretch it gently over the front of the microphone and slip it into position. Unfasten the rear windscreen sleeve, place it over the microphone body including the 358

stand clamp, and press closed. The sleeve should be kept as far forward on the microphone as possible to ensure a seal between the two windscreen halves. Placement is less critical on the 664A due to the integral stand clamp.

Important Note:

To accomplish the greatest possible wind blast reduction, it is recommended that an EV Model 513A filter be used with the microphone and the Model 360. The 513A is a low-frequency cutoff filter that provides high attenuation of frequencies below 100 Hz.
