

S188E

Subwoofer

- SG18 woofer for reliable, extended low-frequency output
- Subwoofer for augmenting the low-frequency performance of EV stage systems
- Natural high-frequency roll-off
- 400-watt long-term power capacity
- Rugged, road-ready cabinet; metal grille; black carpet finish
- Neutrik Speakon® connectors
- 1-3/8-inch stand mount in top allows use of satellite system
- Internal 300-Hz filter for use as an "add-on" subwoofer in nonbiamp systems

Description

The Electro-Voice S188E is a 400-watt subwoofer loudspeaker system which combines the attributes of both horn-loaded and vented-box designs. It utilizes the unique SubScoop™ cabinet construction with a high-output SG18 woofer. The design behaves like a horn over much of its range, but without the time delay and weight problems usually associated with conventional designs. Vented-box principles take over for the lowest octave and assist in producing exceptionally high levels of clean, punchy bass from a subcompact box. The reverse woofer orientation has been used to optimize the rear chamber volume and decrease the horn flare rate for extended low-end performance.

The S188E can be used to augment the bass performance of any Electro-Voice stage system. (This may involve the use of appropriate electronics and crossovers.) A 1-3/8-in. stand-mount receptacle on the top surface of the S188E allows satellite speaker systems such as the S12 and S15 to be used (see Figure 4).

Use in Multiples

The S188E may be used in multiples to increase acoustic output. A 6-dB increase in maximum acoustic output occurs when two

speaker systems are placed side by side and paralleled, yielding a 4-ohm load. For operation at very-low frequencies, the woofer cones "mutually couple," acting as one system with twice the effective cone area and power-handling capacity of a single system. Increasing the cone area doubles the efficiency, providing a 3-dB increase in sound pressure level. The doubled power capacity provides the potential for an additional 3-dB gain in maximum acoustic output.

Mutual coupling occurs when the frequency is such that the center-to-center distance between the two woofer manifolds is less than about one-half wavelength. When the distance is greater than one-half wavelength, as would occur if two S188E's were widely spaced, the level increase tends to be limited to the 3-dB power-handling increase.

The woofer is connected using one of the Neutrik Speakon® connectors. Electro-Voice recommends the Neutrik NL4MPR-V connector be used in most high power situations. A parallel woofer can be connected using the other connector. Care must be taken not to abuse the amplifier by connecting impedances which are too low.

Crossovers and Amplifiers

To optimize performance, the S188E should be used in conjunction with an active cross-

over with a minimum slope of 12 dB per octave and a crossover frequency in the range of 100 to 250 Hz. Due to the high efficiency of the S188E, less amplifier input is needed to achieve a given sound output level. The high power-handling capacity of the S188E permits the use of amplifiers with a rating of up to 800 watts rms into 8 ohms.

Speaker Protection

When in the vented-box mode, the SubScoop™ like all other vented systems, experiences rapidly increasing cone excursion below the box-tuning frequency. The acoustic output is also decreasing rapidly; therefore, it is sensible to protect the S188E and maximize the power output of the subwoofer by inserting an active 32-Hz high-pass filter with a slope of at least 12 dB per octave into the circuit. Such subpassband filters are found in many commercially available crossovers and equalizers including items manufactured by Electro-Voice.

Frequency Response

The S188E's axial frequency response was measured in Electro-Voice's large anechoic chamber at a distance of 3 meters (10 feet) with a swept sine-wave input. Figure 1 has been averaged and corrected for 1 watt at 1 meter.

S188E Subwoofer

Enclosure Construction

Intended to be used as a portable speaker system, the S188E is ruggedly constructed of 3/4-inch Road-Wood™. All joints are dado cut, and the cabinet is finished with a densely woven, abuse-resistant carpet that is both attractive and highly durable. A full-length steel grille protects the woofer from damage. Large, heavy-duty metal corner protectors, firmly secured rubber feet and recessed handles complete the picture, ensuring that the S188E speaker system is ideally suited for a long and reliable life on the road.

S188E Connections

The S188E is equipped with two paralleled Neutrik Speakon® NL4MPR-V connectors, selected for their ability to reliably deliver to the speaker components the high currents delivered by high-wattage power amplifiers. An NL4FC mating connector is supplied. The NL4FC is a four-pin connector, and Figure 5 shows how the usual two-conductor speaker cable should be wired to pins 1+ and 1- of the connector. Two typical connectors at the power amplifier end of the cable are shown: banana and 1/4-inch phone plugs. (The banana plug provides the more reliable connection.)

Note also that Neutrik Speakon® cables, connectors and wiring accessories are available from Pro Co Sound, Inc., and Whirlwind Music Distributors, Inc. To find your local Pro Co, Whirlwind or Neutrik dealer, contact:

Use With Satellite Speaker Systems

The 1-3/8-in. stand mount in the top surface of the S188E can be used with any length of standard 1-3/8-in. tube. Care should be taken to ensure that the S188E is used on a flat

and level surface. Electro-Voice strongly recommends that the top of the satellite speaker be no more than 2,440 mm (8 ft) above the ground and weigh no more than 34 kg (75 lb). It is the responsibility of the user to ensure that the system is safe and stable. Do not use where the system can be easily knocked over.

Service

In the unlikely event the S188E requires service, the woofer can be replaced or serviced from the front. A service data sheet is available from Electro-Voice.

Power-Handling Test

Electro-Voice components and systems are manufactured to exacting standards, ensuring they will hold up, not only through the most rigorous of power tests, but also through continued use in arduous, real-life conditions. The EIA Loudspeaker Power Rating Full Range (ANSI/EIA RS-426-A 1980) uses a noise spectrum which mimics typical music and tests the thermal and mechanical capabilities of the components. Electro-Voice will support relevant additional standards as and when they become available. Extreme, in-house power tests, which push the performance boundaries of the woofers, are also performed and passed to ensure years of trouble-free service.

Specifically, the S188E passes ANSI/EIA RS-426-A 1980 with the following values:

$$R_{SR} = 6.9 \text{ ohms } (1.15 \times R_E)$$

$$P_{E(MAX)} = 400 \text{ watts}$$

$$\text{Test voltage} = \begin{matrix} 52.4 \text{ volts rms,} \\ 104.8 \text{ volts peak} \end{matrix}$$

The "peak" power-handling capacity of a woofer is determined by the peak test voltage amount. For the S188E, a 104.8-volt peak test voltage translates into 1,600-watts short-term peak power-handling capacity. This is the equivalent of four times the "average" power-handling capacity, and is a peak that can be sustained for only a few milliseconds. However, this sort of short duration peak is very typical in speech and music. Provided the amplifier can reproduce the signal accurately, without clipping, the woofer will also perform accurately and reliably, even at these levels.

Architects' and Engineers' Specifications

The loudspeaker shall be a horn-loaded type. The low frequencies shall be reproduced with a 400-watt (ANSI/EIA RS-426-A 1980) SG18 460-mm (18-in.) woofer. The system will reproduce the frequencies from 33 to 250 Hz. The system shall be capable of producing average sound levels in excess of 126 dB in the long term, and short-term peaks of 132 dB.

The enclosure shall be constructed of black, carpeted, 3/4-inch Road-Wood™ and have a metal grille which attaches with six screws. The dimensions shall be 833 mm (32.8 in.) tall, 630 mm (24.8 in.) wide and 609 mm (24.0 in.) deep. The system shall weigh 49.4 kg (109 lb). Neutrik Speakon® connectors shall be the input connectors.

A 1-3/8-in. stand mount capable of supporting 34 kg (75 lb) will be provided in the top surface of the S188E enclosure.

The loudspeaker system shall be the Electro-Voice S188E subwoofer.

Uniform Limited Warranty Statement

Electro-Voice products are guaranteed against malfunction due to defects in materials or workmanship for a specified period, as noted in the individual product-line statement(s) below, or in the individual product data sheet or owner's manual, beginning with the date of original purchase. If such malfunction occurs during the specified period, the product will be repaired or replaced (at our option) without charge. The product will be returned to the customer prepaid.

Exclusions and Limitations: The Limited Warranty does not apply to: (a) exterior finish or appearance; (b) certain specific items described in the individual product-line statement(s) below, or in the individual product data sheet or owner's manual; (c) malfunction resulting from use or operation of the product other than as specified in the product data sheet or owner's manual; (d) malfunction resulting from misuse or abuse of the product; or (e) malfunction occurring at any time after repairs have been made to the product by anyone other than EVI Audio Service or any of its authorized service

S188E Subwoofer

representatives. **Obtaining Warranty Service:** To obtain warranty service, a customer must deliver the product, prepaid, to EVI Audio Service or any of its authorized service representatives together with proof of purchase of the product in the form of a bill of sale or receipted invoice. A list of authorized service representatives is available from EVI Audio Service at 600 Cecil Street, Buchanan, MI 49107 (800/234/6831 or FAX 616/695/4743). **Incidental and Consequential Damages Excluded:** Product repair or replacement and return to the customer are the only remedies provided to the customer. Electro-Voice shall not be liable for any incidental or consequential damages including, without limitation, injury to per-

sons or property or loss of use. Some states do not allow the exclusion or limitation of incidental or consequential damages so the above limitation or exclusion may not apply to you. **Other Rights:** This warranty gives you specific legal rights, and you may also have other rights which vary from state to state.

Electro-Voice Speakers and Speaker Systems are guaranteed against malfunction due to defects in materials or workmanship for a period of five (5) years from the date of original purchase. The Limited Warranty does not apply to burned voice coils or malfunctions such as cone and/or coil damage resulting from improperly designed enclosures. Electro-Voice active electronics associated

with the speaker systems are guaranteed for three (3) years from the date of original purchase. Additional details are included in the Uniform Limited Warranty statement.

For warranty repair, service information, or a listing of the repair facilities nearest you, contact the service repair department at: 616/695-6831 or 800/685-2606.

For technical assistance, contact Technical Support at 800/234-6831 or 616/695-6831, M-F, 8:00 a.m. to 5:00 p.m. Eastern Standard time.

Specifications

Typical Axial Frequency Response (swept one-third-octave pink noise, anechoic environment, 4 volts at 10 feet, normalized for 1 watt/1meter; see Figure 1):

45-250 Hz

Low-Frequency 3-dB-Down Point:
45 Hz

Usable Low-Frequency Limit (10-dB-Down Point):
33 Hz

Half-Space Reference Efficiency:
6.0%

Long-Term Average Power-Handling Capacity per ANSI/EIA RS-426-A 1980 (see Power-Handling Capacity section):

400 watts

Maximum Woofer Acoustic Output:
24 watts

Sensitivity (SPL at 1 meter, 1 watt input, anechoic environment, band-limited pink noise signal, 50 to 200 Hz):
99 dB

Dispersion Angle Included by 6-dB-Down Points on Polar Responses:

Essentially omnidirectional

Distortion, 0.1 Full Power Input (see Figure 2),

Second Harmonic,
100 Hz: -52 dB, 0.25%

Third Harmonic,
100 Hz: -44 dB, 0.63%

Transducer Complement:
SG18

Box Tuning Frequency:
38 Hz

Recommended Crossover Frequency:
250 Hz or-below

Recommended Crossover Slope:
12 dB per octave

Impedance,

Nominal:
8 ohms

Minimum:
6.6 ohms

Input Connectors:

Two Neutrik Speakon® NL4MPR-V

Mounting:

Top surface contains stand mount receptacle for use with satellite speaker system

Materials,

Enclosure:

Black, carpet-covered ³/₄-in. Road-Wood™

Grille:

Black perforated metal
