Electro-Voice°

AP2400

Dual-Channel Power Amplifier

- 215 watts per channel at 8 ohms,
 1 kHz
- Independent channel selection for 8/4-ohm and/or 70-volt operation
- Ultraquiet and efficient cooling system
- Interchangeable input modules
- Illegal mode protection for mono output modes
- Linkable signal processing PCBs plug directly onto input modules
- · InterActive Technology compatible

Description

The Electro-Voice AP2400 dual-channel power amplifier is designed for direct voice-coil drive and/or 70-volt distributed systems. Each channel can be independently configured for 70-volt line operation or 8/4-ohm systems. The two channels can be paralleled or bridged for driving a single load.

This amplifier features an ultraquiet, continuously variable cooling system which pulls air from front to rear in a directed fashion which focuses the air flow on the critical components. A removable air filter is incorporated into the front grille allowing easy access for cleaning or replacement.

The signal input module is removable and comes standard with both XLR and screw terminal connectors. Optional signal processing PCBs plug directly onto the input modules. Control module options provide compatibility and connection to EVI Audio's Interactive Technology network, allowing remote, centralized supervision and/or control of the amplifier.

Each channel is protected against load shorts, over temperature and output DC. Front panel indicators provide a visual display of signal present, signal clip and stand by for each channel, as well as a power on indicator.

Architects' and Engineers' Specifications

The power amplifier shall be a two-rackspace, dual-channel amplifier providing 100 watts per channel in dual-channel mode. The amplifier will provide an incorporated means to independently configure each channel for either 8/4-ohm loads or 70-volt line operation.

The amplifier shall have a switchable configuration between dual-channel, parallel mono and bridged mono mode. The amplifier will also provide a guard against illegal mode operation with a visual indicator as well as disabling operation until channel load configurations correspond to output configuration mode. Bridged mono output mode shall provide a differential balanced signal to the speaker load.

The amplifier will incorporate a directed air flow cooling system utilizing an ultraquiet continuously variable cross-flow fan pulling air from the front and pushing air out the rear of the amplifier. The unit will provide a front-accessible air filter.

The amplifier shall incorporate interchangable signal input modules which provide for signal processing PCBs to be directly connected to the module without replacement. Input modules will provide both XLR and screw terminal connectors in a parallel circuit. In-

put module pinouts shall be published information. The amplifier will provide for optional Interactive Technology control modules to be used.

The amplifier shall meet the following performance criteria. Rated power in dual channel mode: 4-ohm = 250 watts, 8-ohm = 200 watts, 70-volt = 200 watts; rated power in parallel mono mode: 2-ohm = 500 watts, 4-ohm = 400 watts, 8-ohm = 200 watts, 70-volt = 400 watts; rated power in bridged mono mode: 8-ohm = 500 watts. 16-ohm = 400 watts. 70-volt = 400 watts. 140-volt = 400 watts.

The power amplifier shall be 482.6 mm (19 in.) wide by 406.4 mm (16 in.) deep by 88.1 mm (3.4 in.) high and weigh 13.95 kg (30.75 lb).

The power amplifier shall be the Electro-Voice AP2400.

Uniform Limited Warranty Statement

Electro-Voice products are guaranteed against malfunction due to defects in materials or workmanship for a specified period, as noted in the individual product-line statement(s) below, or in the individual product data sheet or owner's manual, beginning with the date of original purchase. If such malfunction occurs during the specified period, the product will be repaired or replaced (at our option) without charge. The product

AP2400 Dual-Channel Power Amplifier

will be returned to the customer prepaid. Exclusions and Limitations: The Limited Warranty does not apply to: (a) exterior finish or appearance; (b) certain specific items described in the individual product-line statement(s) below, or in the individual product data sheet or owner's manual; (c) malfunction resulting from use or operation of the product other than as specified in the product data sheet or owner's manual; (d) malfunction resulting from misuse or abuse of the product; or (e) malfunction occurring at any time after repairs have been made to the product by anyone other than EVI Audio Service or any of its authorized service representatives. Obtaining Warranty Service: To obtain warranty service, a customer must deliver the product, prepaid, to EVI Audio Service or any of its authorized ser-

vice representatives together with proof of purchase of the product in the form of a bill of sale or receipted invoice. A list of authorized service representatives is available from EVI Audio Service at 600 Cecil Street, Buchanan, MI 49107 (800/234/6831 or FAX 616/695/4743). Incidental and Consequential Damages Excluded: Product repair or replacement and return to the customer are the only remedies provided to the customer. Electro-Voice shall not be liable for any incidental or consequential damages including, without limitation, injury to persons or property or loss of use. Some states do not allow the exclusion or limitation of incidental or consequential damages so the above limitation or exclusion may not apply to you. Other Rights: This warranty gives you specific legal rights, and you may also have other rights which vary from state to state.

Electro-Voice Electronics are guaranteed against malfunction due to defects in materials or workmanship for a period of three (3) years from the date of original purchase. Additional details are included in the Uniform Limited Warranty statement.

For warranty repair, service information, or a listing of the repair facilities nearest you, contact the service repair department at: 616/695-6831 or 800/685-2606.

For technical assistance, contact Technical Support at 800/234-6831 or 616/695-6831, M-F, 8:00 a.m. to 5:00 p.m. Eastern Standard time.

Specifications subject to change without notice.

Input Card Pin Assignments

AGND. Normally

connected to PIN 17.

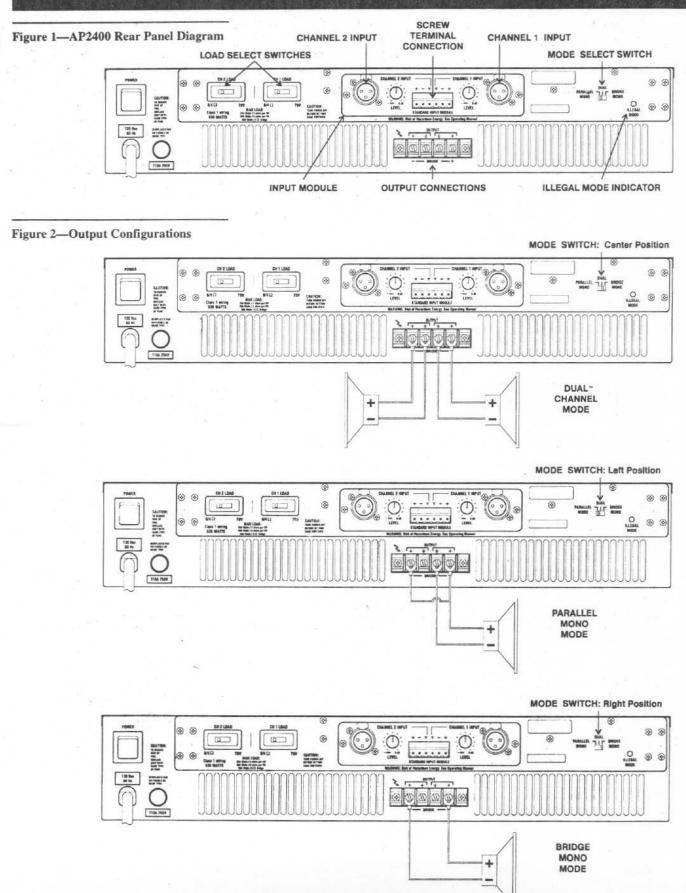

Pin	# Name	Function	Pin#	Name	Function	Pin #	Name	Function

AP2400 Dual-Channel Power Amplifier

Specifications

All output power specifications are for 120 V ac input power unless otherwise stated.

Full Power, 0.1% THD, 1 kHz (30 kHz measurement bandwidth), both channels driven, 120 V ac input power,

Dual Mode:

4 ohm 264 watts 8 ohm 215 watts 70 volt 227 watts

Parallel Mono Mode:

2 ohm 507 watts 70 volt 464 watts

Bridged Mono Mode 8 ohm 542 watts

8 ohm 542 watts 140 volt 458 watts

Frequency Response:

10 Hz to 80 kHz

(ref. 1 kHz, 1 watt output. +0/-3 dBr)

Power Bandwidth:

20 Hz to 20 kHz

(ref. 1 kHz, +0/-0.5 dBr where 0 dBr = rated output power in any mode)

Voltage Gain (ref. 1 kHz):

Dual Mode

4/8 ohm 34.2 dBu 70 volt 39.2 dBu Parallel Mono Mode 2/4/8/ ohm 34.2 dBu 70 volt 39.2 dBu

Bridged Mono Mode

8/16 ohm 40.2 dBu 140 volt 45.2 dBu

Signal to Noise: >100 dBr (A weighted) measured below rated output

Rated Power THD:

<0.1% 20 - 20 kHz (any mode, 30 kHz measurement bandwidth)

Sensitivity,

8 ohm/70 volt/140 volt: 0 dBu (0.775 V RMS)

4 ohm:

-2 dBu (0.616 V RMS) Input Impedance: 20 k ohms Source Impedance: 0.032 ohms

Cross Talk: < -70 dB at 1 kHz

DC Offset: < 5 mVSlew Rate: $15 \text{ V/}\mu\text{S}$

Damping Factor: >300 (1 kHz, 8 ohm)

AC Power: 120 V ac/60 Hz Minimum AC Voltage:

95 V ac/60 Hz Power Consumption: See Table 1 (below)

Physical Dimensions:

Height: 88.1 mm (3.4 in.) Width: 482.6 mm (19 in.) Depth: 406.4 mm (16 in.)

Weight:

13.95 kg (30.75 lb) Shipping Weight:

Shipping Weight: 15.81 kg (34.87 lb)

Table 1 - AP2400 Line Current, Power Consumption , Thermal Dissipation and Power Output for Selected Applications

The following table provides guidelines for estimating heat dissipation of each amplifier, given its intended application. This data is based on the following equation:

 $\dot{P}_{dis} = P_{ac} - P_{ld}$

where

P_{dis} = Power dissipated in watts

Pac = True ac mains power in watts consumed

Pid = Total average power delivered to the load

Measurement Conditions:

Line = 120 V ac, both channels driven equally and with equal toads for dual mode measurements.

The application definitions are as follows:

Idle: The amplifier is on with no signal present.

Paging/Background Music: The amplifier is operating with one second announcements (at full power) every 15 seconds or background music which is aircnusted 32 dBr. Continuous Speech: The amplifier is operating with continuous speech that is attenuated (23 dB).

Dynamic: The amplifier is operating with a dynamic input signal such as motion-picture sound track or classical music. Loud passages are at full power, soft passages are equivalent to continuous speech.

Full Music Power: The amplifier is operating with continuous music input at rated output to the load with only occasional clipping
